DETAILED ACTION

This application is an original application filed December 10, 1999, which claims benefit to provisional application 60/111,894, filed December 10, 1998.

Applicants' after final amendment filed October 31, 2003, has been received and entered. Claims 1, 2, 21, 26, 27, 44 and 45 have been amended. Claims 3, 14-20, 22, 28 and 30-43 have been cancelled. Claims 1, 2, 4-13, 21, 23-27, 29, 44 and 45 are pending and currently under examination.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven Highlander on November 3, 2003.

The application has been amended as follows:

In claim 1, final line, delete [animal] and insert "mouse" therein.

In claim 44, first line, after 'A' insert "isolated".

In claim 45, first line, after 'A' insert "isolated".

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The amendment to the claims made in the after final amendment has obviated the basis of the rejections made under 35 USC 112, first and second paragraph. The Examiner's amendment was made for purposes of consistency to clearly define the control as a mouse. The present disclosure reduces to practice a transgenic mouse whose genome comprises an altered endogenous nuclear oxysterol receptor gene (LXR α). The working examples in the specification demonstrate that disruption of the LXR α allele results in the decrease of the LXR α protein and said transgenic mouse quickly exhibits hepatomegaly and cholesterol accumulation when on a high cholesterol diet. Further, the phenotype of the transgenic mouse is present when only one or both alleles have been altered. The product claims have been amended to encompass a transgenic mouse with an altered LXR α allele consistent with the present disclosure. The claimed methods provide use of the transgenic mouse and the means to screen substances for their potential affect on cholesterol related phenotypes (claim 21) and bile acid related phenotypes (claim 27).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
